

EVOLTA

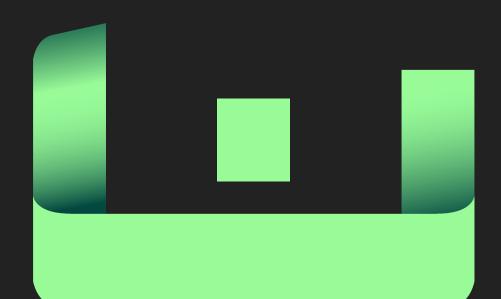

ELECTRIC BOILER

THE COMPACT, ENERGY-EFFICIENT, AND ENVIRONMENTALLY FRIENDLY BOILER

Engineered to deftly handle today's industrial hydronic or steam needs for various sectors, the eVolta is Simoneau's innovative electric boiler that's helping to shape a better tomorrow.

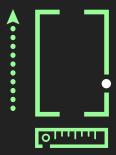

Just like all our boiler solutions, the eVolta is built using the latest in boiler innovations and in compliance with our strict manufacturing standards.

With the eVolta, you're tapping into maximized energy efficiency and actively reducing your carbon footprint thanks in part to its dual energy capacity – allowing you for example to use your building's energy source for the ramping-up process or for overnight standby maintenance.

THE EVOLTA® ADVANTAGES

COMPACT VERTICAL CONFIGURATION

Minimize your footprint. The eVolta is less bulky compared to a fuel-fired boiler with the same capacities. Some models (PL60, PL61 and PL62) can pass through a standard door opening (excluding model PL63).

OPTIMUM WATER VOLUME

Allows for a quicker and more accurate response to load demands. For models PL60, PL61 and PL62.

COMPLETE THERMAL EFFICIENCY

All the electrical energy is transferred to the boiler water and thermal insulation is optimized to reduce thermal losses.

ENVIRONMENTALLY FRIENDLY

No greenhouse gas is generated. Odourless and noiseless, it is ideal for operation in a clean environment and for meeting greenhouse gases reduction objectives.

LOW MAINTENANCE COST

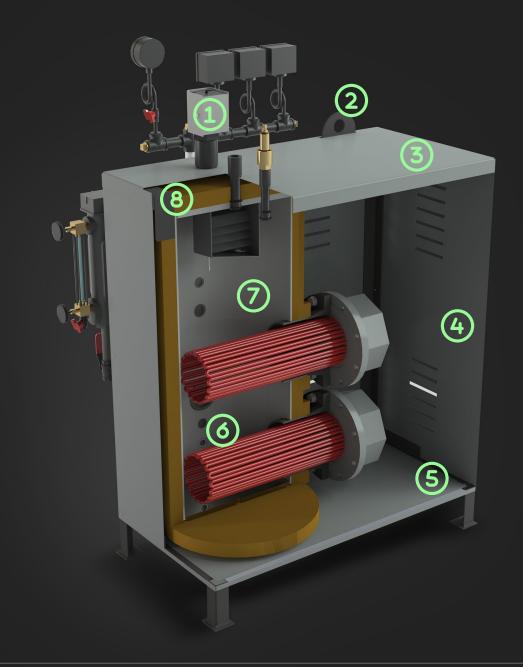

The eVolta's heating elements can be easily accessed and replaced. No combustion and no moving parts ensure easy and low-cost maintenance.

FULLY AUTOMATED

Totally automatic and self-running, the eVolta provides a specifically designed stepped load modulation, optimizing the use of electrical power vs. load demand.

- (1) Control and safety elements shop-mounted and tested
- 2 Sturdy lifting lugs for safe handling
- 3 Aluminum outer casing
- 4 Large access door for easy inspection and maintenance
- (5) Industrial grade support structure
- 6 Inconel elements (copper and stainless steel available upon request) with a maximum watt density of 75 W/sq. in.
- 7 Pressure vessel designed per latest edition of the ASME code with its own Canadian Registration Number (C.R.N.)
- 8 2" high-density insulation with air spacing to minimize heat loss

CHARACTERISTICS

SPECIFICATIONS

Low-pressure steam	≤ 15 psi*
High -pressure steam	≤ 150 psi
Hot water	Low and high temperature
Glycol	Low and high temperature
Thermal liquids	Low and high temperature
Capacity	From 18 to 3600 kW (depending on the PL model)
Registered at the National Board (NB) (except in Quebec)	ASME Code Compliant

^{*} very high pressure available on request, < 150 psi

BURNER MANAGEMENT

Control	Full range / choice of controls
Fuel	Voltage 208V to 575V

ECHO CHART

Emission	0 emission
Sourcing	Local sourcing of material

SELECTION CHART
